

DOSY

Diffusion Ordered Spectroscopy (DOSY)

An Introduction

Translational Diffusion

$$J = dn/dt/A$$

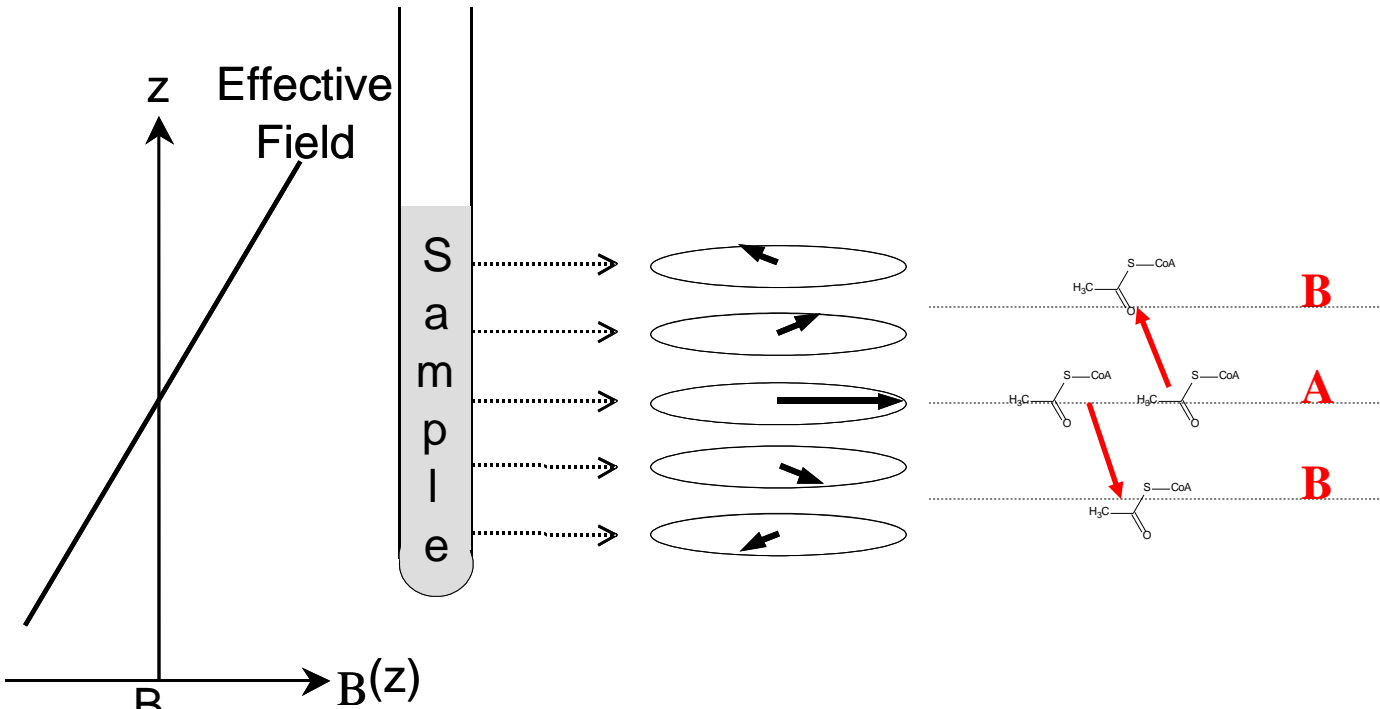

$J = \text{flux}$

$dn/dt = \text{number molecules transported/sec}$

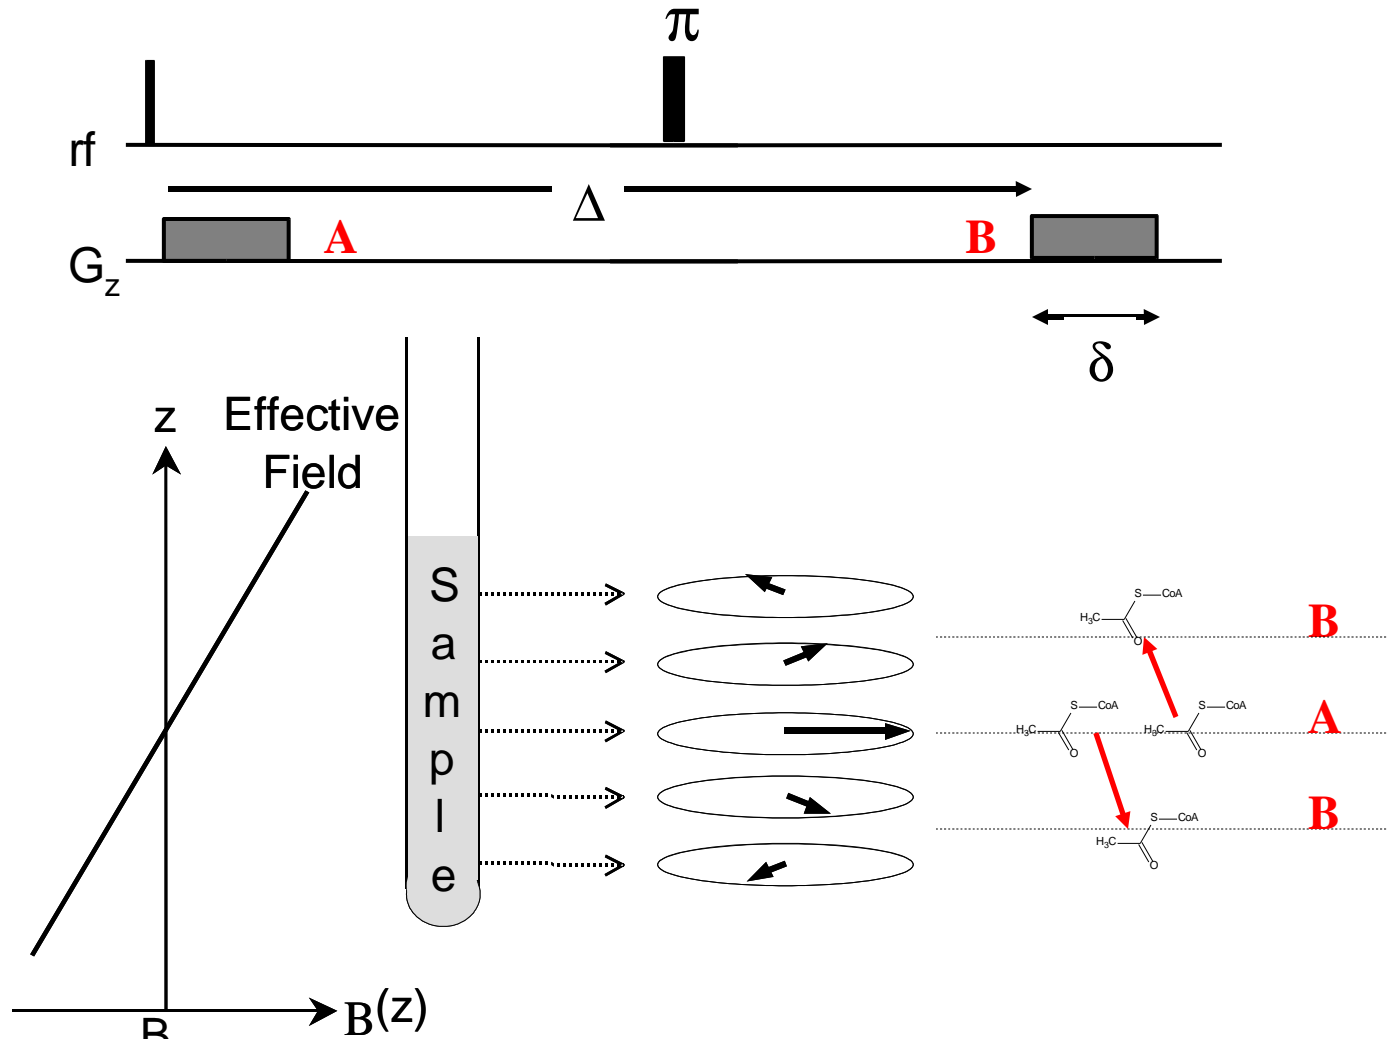

$A = \text{sampling area of the reference plane}$

Translational Diffusion

Translational Diffusion

Translational Diffusion

$$I(q) = I_0 e^{-Dq^2 \Delta'}$$

D : diffusion coefficient

$$\Delta' = \Delta - \delta/3$$

Δ : diffusion time and δ is a correction factor for finite gradients

q : $\gamma g \delta$

γ : gyromagnetic ratio

g : is the amplitude of the applied gradient

δ : duration of the applied gradient

I(q) is a function of:

size, shape, aggregation etc. of molecule

temperature

viscosity

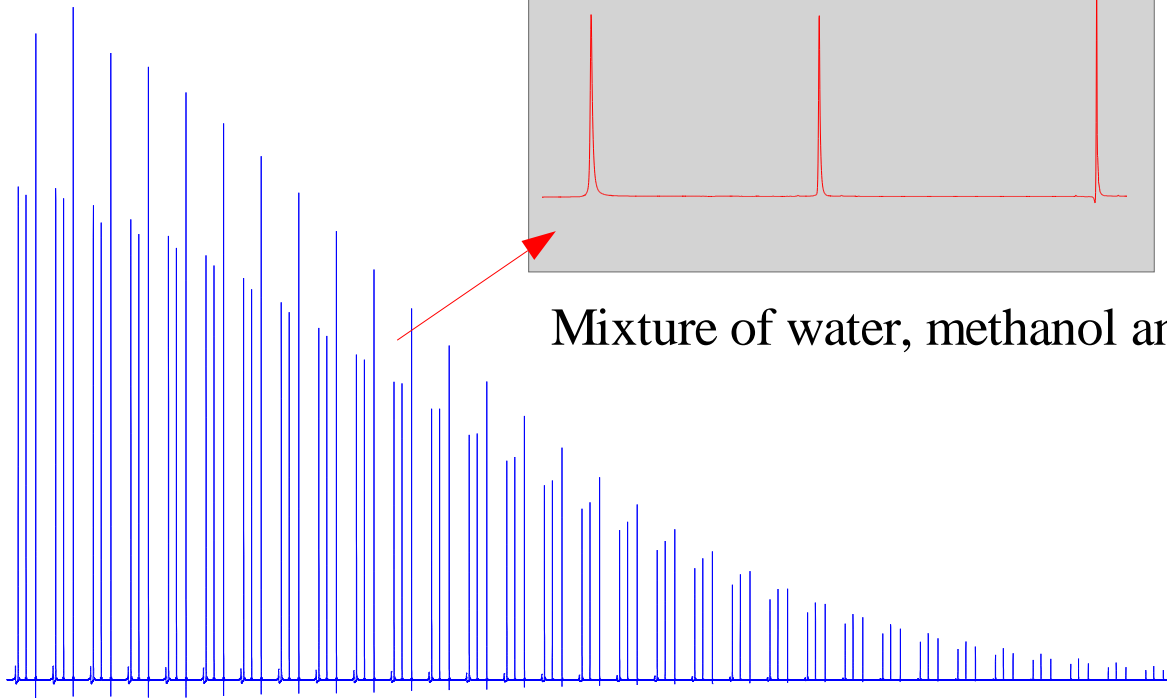

Translational Diffusion

Decay of magnetization as function of gradient intensity

Mixture of water, methanol and acetone

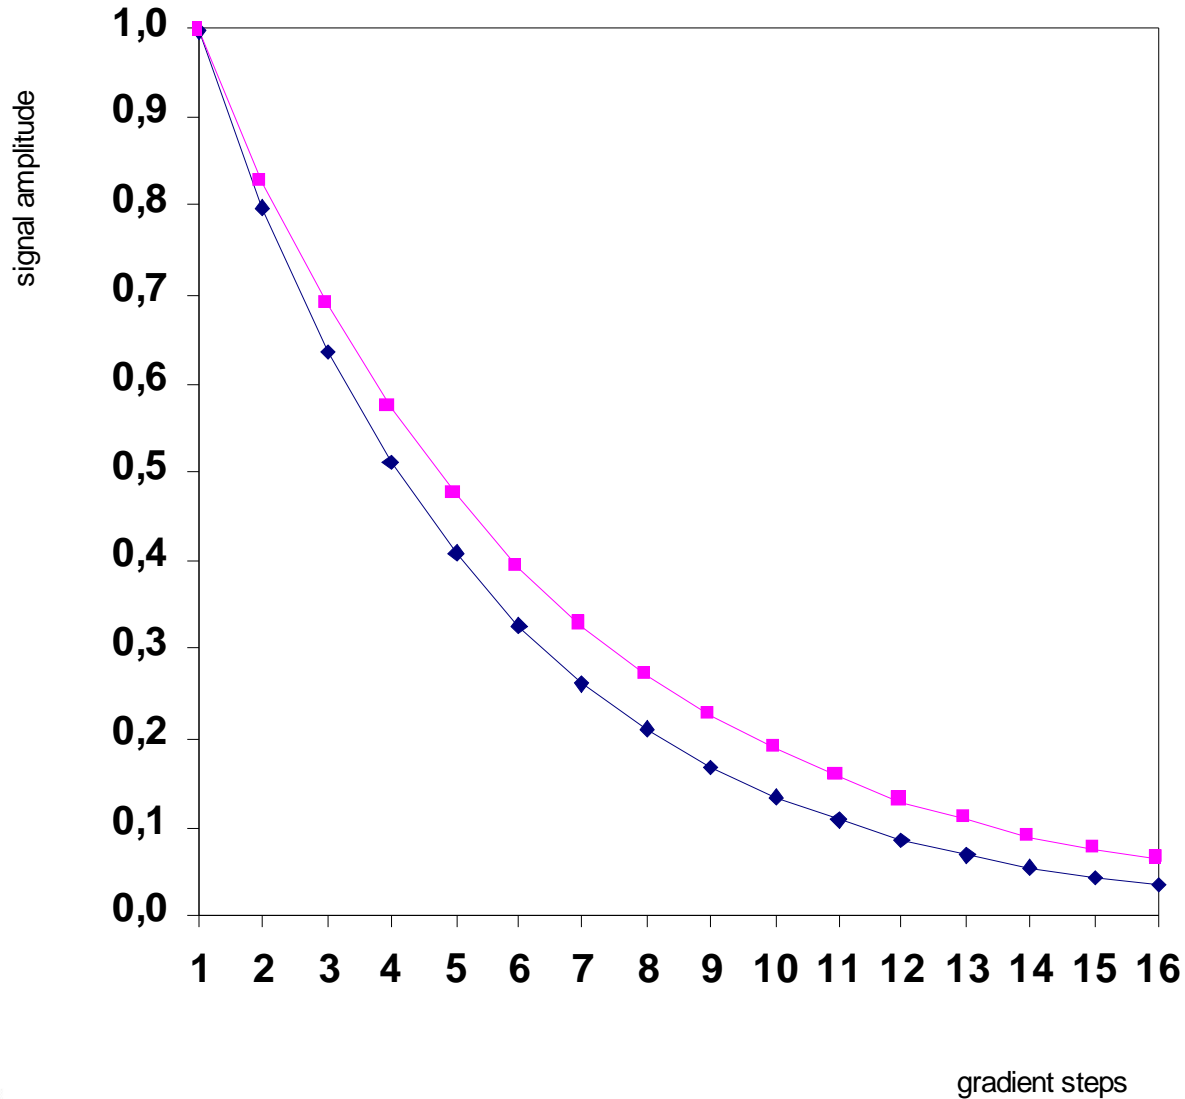

Diffusion und DOSY

Stacked plot of a diffusion spectrum after F2 transformation. On the F2 axis some of the strong signals of the peptide mixture are visible. The F1 axis shows the decay of the signals with increased gradient strength due to the diffusion of the molecules in solution.

Diffusion and DOSY

DOSY: the principle

Diffusion and DOSY

overlapping signals

Signal decay: low noise

Diffusion and DOSY

overlapping signals and S/N

Signal decay: high S/N

Signal decay: low S/N

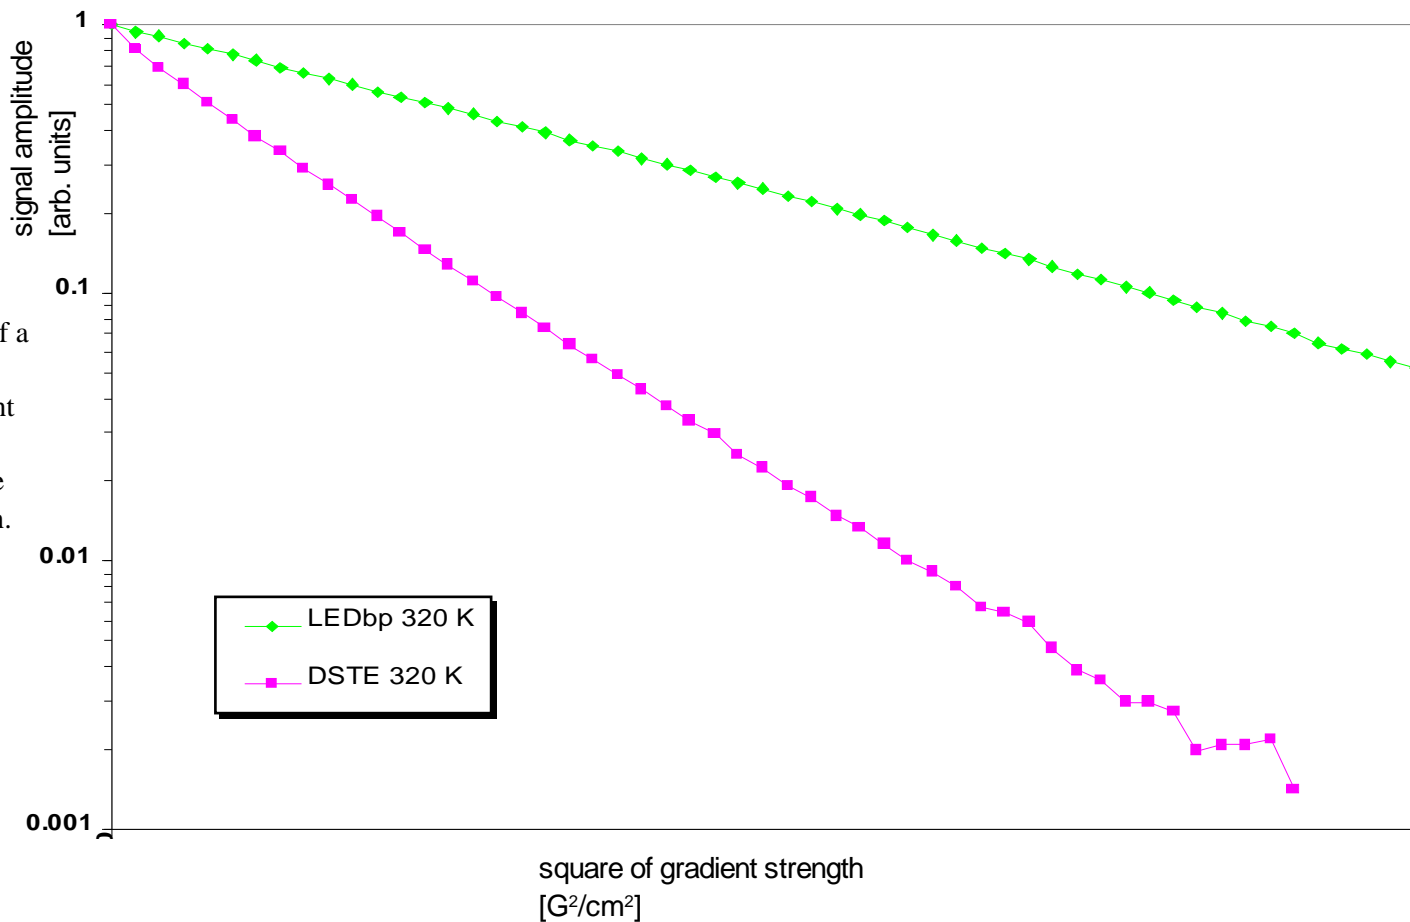

Diffusion and DOSY

Convection

self diffusion measurements of a peptide in DMSO at different temperatures and with different pulse sequences. The signal amplitude is plotted versus the square of the gradient strength.

DOSY: Pulse and AU Programs

- AU Programs
 - dosy, setdiffparm
- Pulse Programs (1D-versions not shown)

Stimulated Echo Sequences:

- stegp1s, ste**bp**gp1s **bp**: bipolar gradients
- ste**bp**gp1s**19** **19**: 3919 WATERGATE
- ste**bp**gp**in**1s **in**: INEPT, for X-nuclei

Double Stimulated Echo Sequences:

- dstegp3s

DOSY: Pulse and AU Programs

Stimulated Echo plus LED Sequences:

- ledgp2s
- led**bp**gp2s **bp**: bipolar gradients
- ledbpgp**ml**2s**2d** **ml**: diffusion filtered **2D**TOCSY
- ledbpgp**ml**2s**19**2d **19**: additional WATERGATE
- ledbpgp**co**2s**3d** **co**: **3D** DOSY-COSY
- ledbpgp**ml**2s**3d** **ml**: **3D** DOSY-TOCSY
- ledbpgp**no**3s**3d** **no**: **3D** DOSY-NOESY

DOSY: Data

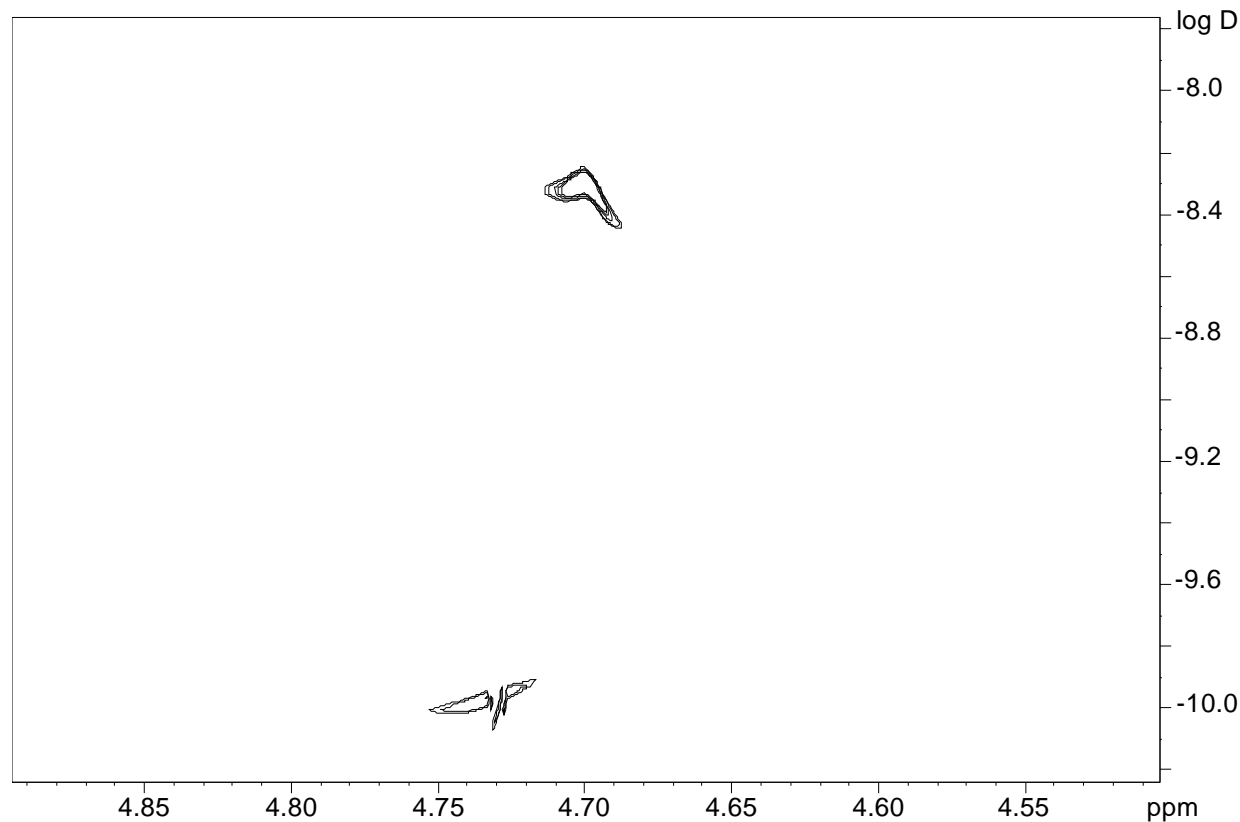

- Data are compatible with T_1/T_2 software
- F1 axis shows diffusion constant:
 - logarithmic: $\log D$
 - linear: $D * 1e9$

DOSY: two water species

Intra- and inter cellular water

DOSY: mixture of 4 esters

P-Hydroxybenzoic acid ester

R= -Me, -Et, -Prop, -But

DOSY: mixture of 4 esters

P-Hydroxybenzoic acid ester
R= -Me, -Et, -Prop, -But
